

## **STATEMENT OF PURPOSE**

### **RS18214**

The proposed legislation will amend current law governing the amount of incentive bonus that may be made available to lottery game retailers based on the attainment of sales volume or other objectives specified by the director for each lottery game. The legislation increases the allowed potential incentive bonus percentage for lottery game retailers from 1% to 2%. This increase will provide the director with the ability to be responsive to changes in retail market conditions.

### **FISCAL NOTE**

There will be no fiscal impact to the General Fund. The dollar amount of increased incentive bonus compensation paid to lottery retailers will vary from year to year. In any given year, the amount of incentive bonus paid above that currently authorized by statute would only result from increased overall Lottery sales that would be accretive to the dividend.
