

Dear Mr. Nugent,

As part of the Draft update to the 2007 Idaho Energy Plan, I think it is important to integrate energy efficiency in buildings as well as reviewing building codes on a 3 year cycle. This will help to avoid the cost of new energy generation. I also think it should be required for municipalities of a certain size (e.g. 20,000-30,000 constituents) to conduct local energy plans that identify and prioritize energy efficiency project and programs. This will help to foster local knowledge about energy efficiency. Thanks

JED GLAVIN
